

About Innowera License Server

This document provides basic overview of Innowera License Server capabilities and system requirements. Please note that actual License Server software and detailed step-by-step installation guide and support will be provided by Innowera at a later stage when your order is fulfilled.

Innowera License Server provides flexibility in installation, usage and maintenances of Innowera licenses. License server installation is a **must** for named or floating licenses and nice to have in case of other license types. License Server is installed within customer's network and is maintained and managed by customer. License Server does not connect to Innowera's network or to cloud or to any other outside network.

- License Server has fairly small foot print and can be installed on any computer that is running Windows operating system.
- Server must be accessible to all Innowera users. If server or firewall between this server and Innowera user is blocking required ports, you will have to open them. Ports are configurable and you can decide which ports you want to use if you do not like default ports. Usually two ports are required.
- License check in/out is performed via TCP/IP and is very efficient, usual check in/out time is in milliseconds.
- License Server does NOT need or use Internet Information Server (IIS), it does not need any external database either. It comes with a small built in web server.
- License Server management can be done using any internet browser from any computer. Restriction can be placed so only authorized person can access the License Server.
- Please note that Floating/Shared Licenses on License Server are usually site and/or time zoned restricted, however, License Server could be in any time zone.
- License Server also provides failover, License Transfer to another License Server, License pooling, License Roaming, Named Licenses, Ability to run on Virtualized server, usage and audit logs and many other advanced features. Refer to this link to learn more: <http://www.reprisesoftware.com/support/end-users.php>
- There may be additional access fee for license server and/or some of the features. Please check with Innowera representative you are working with.

System Requirements	
OS	Windows Server 2003 or higher
CPU	Dual Core CPU or higher
RAM	1 GB RAM or higher
Disk Space	100 MB free disk space
Database	No database is required
Virtualization	Can run on virtualized computer
